

Under the Hood: Xfinity's Most Powerful Gateway

Comcast's next-generation xFi Advanced Gateway, it's first device capable of delivering true multi-gigabit speeds, will roll out to customers in the coming months. Here's a look inside of what makes Comcast's best-in-class, in-home WiFi coverage possible:

Certified for advanced connectivity: WiFi 6 Certification means the xFi Advanced Gateway is designed for high-performance users to handle more capacity and faster speeds.

Thoughtful design that fits in with our customer's homes and lives.

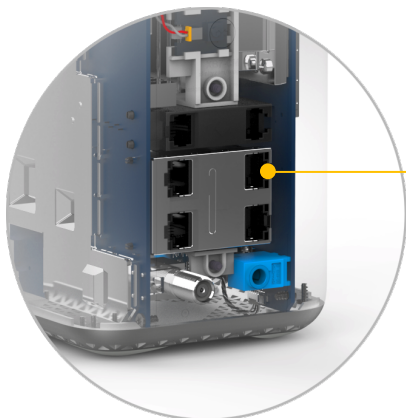

Complete coverage: Combined with xFi pods, customers can create their own personalized mesh home WiFi networks.

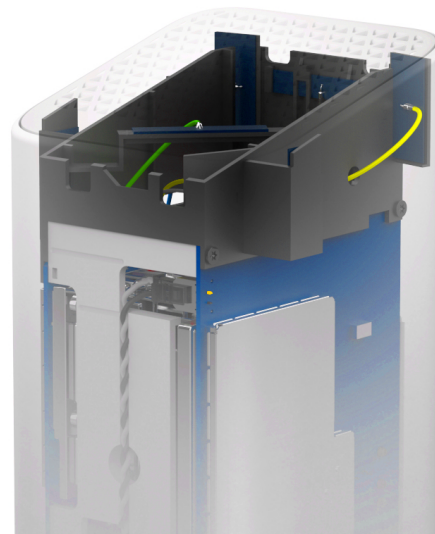

Unprecedented range: Designed with the latest WiFi technology, including four simultaneous dual-band antennas that support both 2.4 GHz and 5 GHz bands, allowing gigabits of data to move with ease.

Hit it with your best shot: This gateway delivers exceptionally lower latency for an unrivaled cloud and online gaming, 4K video streaming, and VR and AR experiences, as these applications increasingly become mainstream.

Built for speed: A 2.5Gbps Ethernet port to support wired speeds greater than 2 Gbps.

Serious versatility: Bluetooth LE and Zigbee radios capable of connecting to virtually any IoT device.
